

ES 290N - Topics in Mineral Physics - Fall - Elise Knittle

Lecture: MW 5-6:45 p.m. Rm 169 A.S.

This is a seminar with various themes very year. Sometimes the group reads and presents papers on various topics of mutual interest, sometimes Dr. Knittle lectures, sometimes members of the group present their own research. Professor Knittle will post a notice outlining what the seminar content will be before the first class meeting. Anyone who thinks they might want to use the Raman spectroscopy lab as a research resource is strongly encouraged to attend.
